

Campus Development

Dallas, Texas

Good Shepherd Episcopal School

Objective

Create a campus environment that supports a growing, high quality, independent school program. Assure consistent, school-savvy technical management of the facility development process over two decades, working with five successive trustee representatives, eight vestries and school boards, three rectors, and three school heads.

Services

Building Solutions leadership has been the project manager on every major project since 1983, assisting in selecting the campus architect at the beginning of the program, managing zoning cases, master planning, and individual project design, contractor selection, and construction. Good Shepherd has become a pioneer in embracing building commissioning as a regular practice, and has adopted US Green Building Council principles for its future developments.

The Project

The capital program consisted of six major building projects, including a gymnasium, middle school, lower school, performing arts center, kindergarten, administration, library, and chapel renovations. In the same period, there were two master plans and re-zonings, a major parking facility development, and annual summer repair programs, all managed by Building Solutions.

Good Shepherd Episcopal School is an ISAS (Independent Schools of the Southwest) accredited school in north Dallas, known as one of the top quality feeder schools to top private high schools throughout the greater Dallas area. It shares a campus with Episcopal Church of the Good Shepherd, which founded the school.
